

Superintendent of Contract Management

October 12, 2007

To: Mark Rusch  
Tri-Lam Roofing and Waterproofing

From: David Royall  
Superintendent of Contract Management  
UTPB

Dear Mark:

This letter is to commend you and your company for your role in providing the University of Texas of the Permian Basin with an excellent roofing system and exterior masonry wall waterproofing for our Industrial Technology Building. This building is a thirty-six year old structure with ten air handling units mounted on the roof. We have had a variety of roofing problems over the years with this building, many being related to the rooftop units. We have also had many problems with the porosity of the masonry walls as well. Repairs have been attempted several times with marginal success, at best. The Garland R-MerLite roofing system you all installed and the waterproofing of the exterior brick walls were just the fix needed for making this building water-tight. We have had several rain storms since completion of this project and have had absolutely no leaks and no water coming through the walls!

Erick Gonzales did an excellent job in overseeing this project. The quality of work from your installers was superb. This project was completed quickly and correctly. It has been a pleasure to work with your company and you. I would have no reservations at all in recommending your company to other building owners. Thanks for a job well done.

Sincerely,

David Royall
